**DETAILED ACTION**

***Reasons for Allowance***

Claims 1-6 and 10-15 are allowed. The prior art of record does not appear to teach or disclose a perfluoropolyether modified silane as claimed that is vacuum deposited. Invie et al. (6,277,485 B1) disclose sputtering an oxide layer prior to applying the silane layer, but do not teach or disclose vacuum depositing or sputtering the silane layer. In addition, applicant has shown experimental results in Examples 1 and 2 to show that the drop angle and peel strength decreases when the silane layer (Example 2) is applied by vacuum deposition. This appears to distinguish the product of applicant's from the product of Invie et al. Applicant has added independent claim 10, which also contains the vacuum depositing step, and claim 12, which is the process of making thereof.
